

Deep Learning Sentiment Analysis Project - Setup Guide

Files to Send

Send only:

- sentiment_analysis.py
- requirements.txt

Do NOT send the venv folder.

Steps for Your Friend

1. Install Python 3.12.
2. Extract the project ZIP.
3. Open the project folder in VS Code.
4. Open a terminal in the project folder.

Create Virtual Environment

```
py -3.12 -m venv venv
```

Activate Virtual Environment

```
venv\Scripts\activate
```

Install Required Libraries

```
pip install -r requirements.txt
```

Run the Project

```
python sentiment_analysis.py
```

Important Notes

- If VS Code is restarted, activate the virtual environment again.
- When '(venv)' appears in the terminal, Python 3.12 is active.
- Without activating venv, the system may use Python 3.14 and TensorFlow may not work.
- The project performs sentiment analysis on IMDb movie reviews using TensorFlow.
